Please, give me feedback on "data visualization made using Tableau"

[Link to Project](#) 1

Here are few questions to help you with the feedback.

1. What do you notice in the visualization?
2. What questions do you have about the data?
3. What relationships do you notice?
4. What do you think is the main takeaway from this visualization?
5. Is there something you do not understand in the graphic?

Regards,

Pradip More

Hello ,

Visualisation is giving details regarding sinking of RMS Titanic. Visualisation has information about number of passengers on board and survived /died during tragedy. Bar charts presented in visualisation representing count of survived and died according to their age group, gender and class of travel. On slide 3 number of passengers on board segregated according their age groups. Data is very well arranged and easy to understand. It gives detail information about tragedy in quick time.

I have question about slide number 4. How siblings and spouse survival data is divided in 8 rows ? Similar question I have about parents and child data. In process of embarkment why data is divided in to C , Q and S format?

It was very informative. Thank you for sharing.

Regards,  
Priyanka
